

55 Cancri e lava life

Skies sparkle above a never-ending ocean of lava

A global team of scientists is spending little time reflecting the time before what better choice for an extreme location? Planet Jovian, or 55 Cancri e, orbits its star called Trappist-1 only 11 light years away. The surface is completely uninhabitable, but you'll like what's above, being it's fascinating. Above the burning horizon, Jovian's star planet Jovian hangs in a dark sky, and a series of glowing particles are seen glow across the horizon to Jovian's dark side. Break your heart over the hottest location spot in the galaxy, 55 Cancri e.
